Investor Webinar Registration

Elevate Uranium Limited ("**Elevate Uranium**", or the "**Company**") (**ASX:EL8**) (**OTC:ELVUF**) invites shareholders and interested investors to a live webinar at which Managing Director Murray Hill will present the results of the ***U-pgrade***™ Pilot Plant program, released to the market on 31 August 2026.

Mr Hill will step through performance across the first four stages of the ***U-pgrade***™ flowsheet, what the results mean for the commercialisation of the ***U-pgrade***™ beneficiation process and the work program ahead of the final stage 5.

Webinar Details

Date	Thursday, 10th September 2026
Time	11:00am AWST / 1:00pm AEST

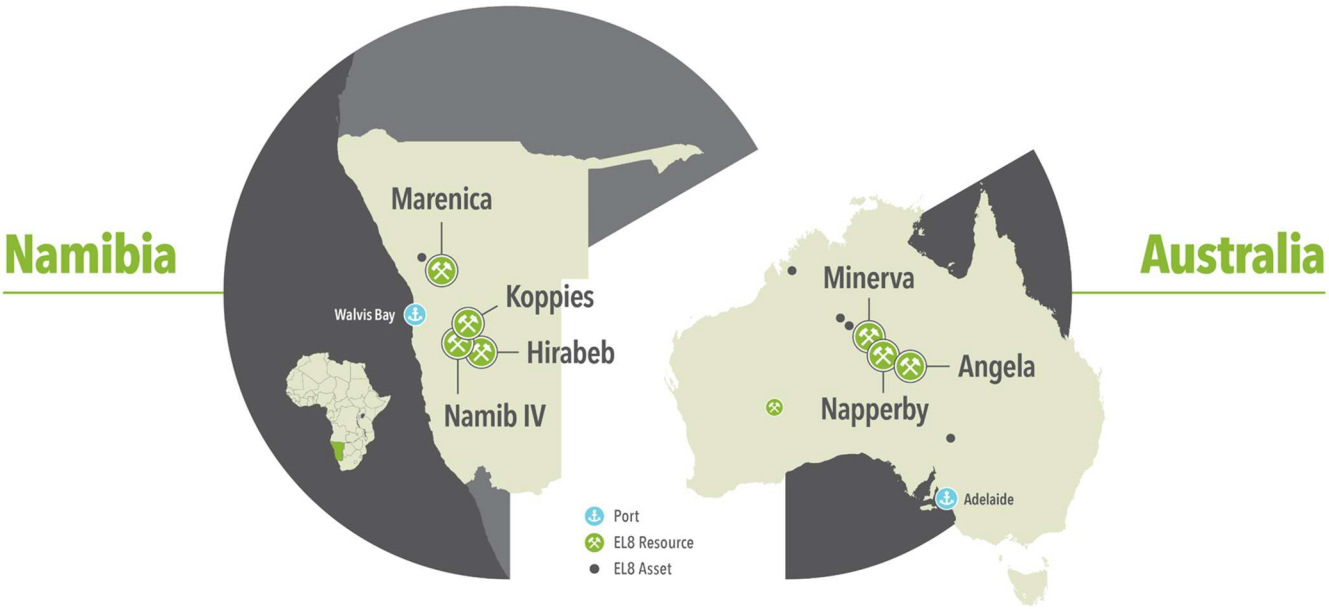
About Elevate Uranium

Elevate Uranium Ltd (ASX:EL8, OTCQX:ELVUF, NSX:EL8) is a uranium exploration and development company focused on unlocking the value of its globally significant resource base through its proprietary, 100%-owned ***U-pgrade™*** beneficiation process.

The Company holds a substantial Mineral Resource portfolio totalling 181 Mlb U_3O_8 across its projects in Namibia and Australia. Its flagship Namibian portfolio is located in the established, world-class Erongo uranium province and includes the Koppies Uranium Project (JORC 2012: 76.2 Mlb U_3O_8) and the Marenica Uranium Project (JORC 2012: 47.5 Mlb U_3O_8 – Elevate Uranium's share).

In Australia, Elevate Uranium has tenements and joint venture interests containing substantial uranium resources. The Angela, Napperby, Thatcher Soak and Minerva project areas; and joint venture holdings in the Bigrlyi, Malawiri, Walbiri and Areva joint ventures, in total contain 57 Mlb of high-grade uranium mineral resources.



The *U-pgrade*™ Strategic Advantage

U-pgrade™ is the Company's patented beneficiation process, which provides a clear pathway to unlock its large-scale, surficial, secondary uranium deposits.

The process is designed to be economically transformational with bench-scale testwork on Marenica Project samples demonstrating the potential of ***U-pgrade™*** to:

- **Concentrate** the uranium by a factor of ~50, increasing the grade of ore from ~93 ppm U_3O_8 to ~ 5,000 ppm U_3O_8.
- **Reject** ~98% of gangue (waste material from the mass prior to leaching).
- **Remove** acid-consuming minerals.
- **Reduce** potential CAPEX and OPEX by ~50% compared to conventional processing.

Beyond application at the Marenica Uranium Project, Elevate Uranium has determined, through bench scale testing, that secondary uranium deposits in Namibia and Australia are amongst those that are amenable to the ***U-pgrade™*** process.

Note: Please refer to ASX announcement dated 18 April 2017 titled "Scoping Study Completed – Marenica Project Highly Competitive with Industry Peers" and ASX announcement dated 4 April 2025 titled "Clarification of U-pgrade™ Ore Samples JORC Compliance" for further details on the factors referred to above.
