Innovative Project Developers

Authorised for release by Christopher Reed, Managing Director of Neometals

Investor Presentation | July 2026

ASX: **NMT** | OTCQX: **NMTAY** | DEU: **9R9**

Important Notices and Disclaimer

Nm Neometals

Summary Information, Not Financial Product Advice or Offer

This presentation has been prepared and issued by Neometals Ltd (**Neometals**, or the **Company**) to provide summary information about the Company and its projects and activities (the "**Projects**") as at the date of this presentation, unless otherwise stated. In receiving this presentation, each recipient agrees to the foregoing terms and conditions.

The information in this presentation is for information purposes only, is current only as at the date of this presentation and is subject to change. It is intended only for those persons to whom it is delivered personally by or on behalf of Neometals. The information contained in this presentation is of general background and does not purport to be complete. The information contained in this presentation does not constitute investment or financial product advice (nor taxation or legal advice) and is not intended to be used as the basis for making an investment decision. In providing this presentation, Neometals has not considered the objectives, financial position or needs of any particular recipients. In all cases, each recipient should conduct its own investigation and analysis of Neometals and should seek its own independent legal, tax and financial advice.

No representation or warranty, express or implied, is made as to the accuracy, reliability, completeness or fairness of the information, opinions and conclusions contained in this presentation. Neither Neometals, its related bodies corporate (as defined in the *Corporations Act* 2001 (Cth)), shareholders or affiliates, nor any of their respective officers, directors, employees, affiliates, partners, representatives, consultants, agents or advisers (each a **Limited Party**) guarantees or makes any representations or warranties, express or implied, as to or takes responsibility for, the accuracy, reliability, completeness or fairness of the information, opinions and conclusions contained in this presentation. Neometals does not represent or warrant that this presentation is complete or that it contains all material information about the Company or the Projects which a prospective investor may require in evaluating a possible investment in the Company or the Projects.

To the maximum extent permitted by law, each Limited Party expressly disclaims any and all liability, including, without limitation, any liability arising out of fault or negligence on the part of any person, for any expenses, damages, costs or loss arising from the use of information contained in this presentation including representations or warranties or in relation to the accuracy or completeness of the information, statements, opinions or matters, express or implied, contained in, arising out of or derived from, or for omissions from, this presentation including, without limitation, any financial information, any estimates or projections and any other financial information derived therefrom. You must conduct your own independent investigations and enquiries as you deem fit.

All dollar values are in Australian Dollars (A$) unless otherwise stated.

US Disclaimer

This presentation is not, and does not constitute, an offer to sell or the solicitation, invitation or recommendation to purchase any securities (including in Australia and the United States) and neither this presentation nor any of the information contained herein shall form the basis of any contract or commitment.

The distribution of this presentation in the United States and elsewhere outside Australia may be restricted by law. Persons who come into possession of this presentation should observe any such restrictions as any non-compliance could contravene applicable securities laws.

Reliance on Third Party Information

To the extent this presentation contains information that has been derived from publicly available sources, Neometals has not independently verified the information obtained from such by third-party sources. While Neometals believes that such information is reliable, no representation or warranty is made as to the accuracy, completeness or reliability of any third-party information and undue reliance should not be placed on any of the third-party information contained in this presentation.

Future Performance and Forward-Looking Statements

This presentation may contain certain forward-looking statements and comments about future events, including Neometals' expectations about the performance of the Projects, its business and certain strategic transactions. Forward looking statements can generally be identified by the use of forward-looking words such as, "expect", "anticipate", "likely", "intend", "should", "could", "may", "predict", "plan", "propose", "will", "believe", "forecast", "estimate", "target" and other similar expressions within the meaning of securities laws of applicable jurisdictions. Indications of, and guidance or outlook on, future earnings or financial position or performance are also forward-looking statements.

Forward looking statements involve inherent risks and uncertainties, both general and specific, and there is a risk that such predictions, forecasts, projections and other forward-looking statements will not be achieved. A number of important factors could cause Neometals' actual results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements, and many of these factors are beyond Neometals' control. Forward looking statements are provided as a general guide only and should not be relied on as an indication or guarantee of future performance and involve known and unknown risks, uncertainty and other factors, many of which are outside the control of the Company.

This presentation is not, and does not constitute, an offer to sell or the solicitation, invitation or recommendation to purchase any securities and neither this presentation nor any of the information contained herein shall form the basis of any contract or commitment.

Funding qualification

This presentation should be read subject to Neometals' ASX announcements dated 25 June 2026 and 1 July 2026 in relation to settlement of Tranche 2 of the placement announced on 20 April 2026. As at 22 July 2026, the Tranche 2 subscription funds had not been received and the Company's temporary cash preservation measures remained in place. Accordingly, statements in this presentation concerning planned activities, development timing, expenditure, funding allocation or project progression are subject to those announcements and should not be read as implying receipt or unconditional availability of Tranche 2 funds.

Compliance Statement

The Competent Person cautions that certain Exploration Results and production data contained within this release have been extracted from historical DEMIRS WAMEX5 annual reports and internal company reports prepared by previous historical operators. Further exploration and evaluation may affect confidence in these data and results under JORC 2012 standards. Nothing has come to the attention of Neometals or its Competent Person that cause them to question the accuracy or reliability of the previously reported data and results.

The Company has undertaken desktop evaluation of the work completed. However, it has not comprehensively validated that data and results and therefore these data and results are to be treated with appropriate caution.

To comply with ASX Listing Rule 5.7 and the associated FAQ 36 (Announcements of material acquisitions – former owners' Exploration Results) details of historic exploration programmes by companies prior to Neometals for the additional historic drill data are reported in Neometals' ASX announcements. WAMEX reports referenced in these announcements can be accessed online at https://geoview.dmp.wa.gov.au/GeoView, using the unique A-number for each report. Each WAMEX report includes a technical explanation of the work completed and results achieved.

Competent Person Statement – Barrambie

Mineral Resource Estimates – The information in this report that relates to the March 2026 Indicated and Inferred Mineral Resource Estimate at the Ironclad gold deposit is based on and fairly represents information and supporting documentation compiled by Clay Gordon, who is currently employed by Neometals Ltd as a Competent Person who is a Member of the Australian Institute of Geoscientists. Mr Gordon is the General Manager Geology. Mr Gordon has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Gordon consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to the Indicated and Inferred Mineral Resource Estimate at the Ironclad gold deposit has been presented in Neometals market announcement dated 10 March 2026 titled "Updated Ironclad Gold Mineral Resource Estimate".

Scoping Study and Production Targets – The information in this report that relates to the Production Targets and forecast financial information derived from it for the Ironclad gold deposit are based on the outcomes of the March 2026 Scoping Study at the Ironclad Gold Deposit. That information has been presented in Neometals market announcement dated 19 March 2026 titled "Positive Ironclad Scoping Study Results". The Company confirms that all the material assumptions underpinning the Production Targets and forecast financial information derived from it continue to apply and have not materially changed.

Exploration Target and Exploration Results – The information in this report that relates to the Exploration Results reported by the Company during 2026 (noted below) for Ironclad, Mystery, Barrambie Ranges and Rinaldi, is based on and fairly represents information and supporting documentation compiled and reviewed by Mr Travis Craig a Competent Person who is a Member of the Australasian Institute of Geologists (AIG) and is currently employed full time by Neometals Ltd as Exploration Manager. Mr Craig has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for the Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Craig consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

Information in this report that relates to Exploration Targets and Exploration Results reported by the Company during 2024 and 2025 (noted below) for Barrambie Gold Project, Barrambie Ranges, Ironclad and Mystery, is based on and fairly represents information and supporting documentation compiled by Mr Jeremy Peters FAusIMM CP (Min, Geo). Mr Peters is a Director of Burnt Shirt Pty Ltd, a geological and mining engineering consultancy, and has sufficient experience relevant to the reporting of Exploration Results, Exploration Targets and Mineral Resources in Western Australian Archaean orogenic gold mineralisation to qualify as a Competent Person as defined in the December 2012 Edition of the "Australasian Code for Reporting of Exploration Results". Mr Peters consents to the inclusion in this report of the matters based on information in the form and context in which it appears.

The information in this presentation relating to Exploration Results, Exploration Targets and Mineral Resources is extracted from the reports listed below and available to view on www.neometals.com.au/en/investors or ASX's website at www.asx.com.au.

Neometals

Competent Person Statement – Utah Brine Project

The information in this report that relates to Exploration Results and Exploration Targets reported during 2026 for the Utah Brine Project is based on information compiled by Dr Biao Qiu (Ph.D., P.E. (CO), P.Eng. (SK & AB)), a full time employee of Agapito Associates LLC a geological and mining engineering consultancy and has sufficient experience relevant to the styles of mineralisation, and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined under the JORC Code 2012. Dr Qiu consents to the inclusion in this report of the matters based on information in the form and context in which it appears.

The information in this presentation relating to Exploration Results and Exploration Targets is extracted from the reports listed below and available to view on www.neometals.com.au/en/investors or ASX's website at www.asx.com.au.

1.Neometals Ltd ASX announcement, 20 Mar 2026 — "Neometals enters US Lithium-Potash Brine JV." All JV terms, project locality (80,000+ acres), infrastructure, and financial details.

2.ASX announcement, 23 April 2026 — "Substantial Potash and Lithium Exploration Target Defined at Utah Brine Project.

3.Hite, R.J. (1978) Paradox Formation geological reference — evaporitic sequence description, 29 layers, paleo-seawater derived brines. Available via USGS publications archive 5 February 2025,

4. Mandrake Resources Limited ASX announcement(s), May 2024 — DLE pilot: 92% Li recovery (Electroflow) and 99.9% LiOH purity (ElectraLith).

5. Standard Lithium Ltd / Equinor SWA Project (Smackover, AR) — US$225M total DOE grant (Battery Materials Processing + CMEI, finalised Jan 2025). Same IX-DLE + brownfield O&G approach as UBC.

6. Lynas Rare Earths Ltd DoD DPA Title III — US$120M+ for Texas rare earths processing (Mar 2022 + follow-on). ASX-listed Australian co. with U.S. subsidiary — identical structure to NMT/UBC.

7. Anson Resources Anson Resources · US EXIM non-binding LoI for a long-term debt

8. The Michigan Potash Company LLC, 80m US$ USDA precedent

9. JORC Committee Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code 2012).

Footnote references 1 to 9 throughout the Utah Brine Corporation of this presentation relate to these announcements.

Security of Tenure and Licence to Operate

At the time of reporting, Utah Brine Corporation (51% Neometals) holds a substantial but not yet fully secured tenure position comprising unpatented placer claims under the US Mining Act, together with prospecting permit applications and potassium lease nominations under the US Minerals Leasing Act. Not all applications have been granted and there is no assurance they will be granted in whole or in part. The Project area is subject to adjacent or overlapping third-party mineral interests, including State and SITLA tenure, and brine-hosted mineralisation may extend across tenure boundaries. As a result, future development may require pooling, unitisation, joint development arrangements or other regulatory determinations. Tenure rights for lithium and potassium are governed by different legal and regulatory regimes, and the extent to which the Company secures rights to both commodities will depend on the status and interaction of these tenure instruments. No known impediments to obtaining a licence to operate have been identified other than customary regulatory approvals, tenure uncertainties, third-party rights, land access requirements and potential unitisation or pooling requirements.

Key Project Risks

No mineral resources or ore reserves as defined in the JORC Code 2012 have been estimated for the Utah Brine Project. All references to potential scale, development pathways, or project studies are conceptual in nature and remain subject to further exploration, test work, permitting, technical studies, and funding. Actual brine extraction rates, grades, concentrations, and processing outcomes may differ materially from estimates or expectations and may not support a commercially viable project.

Government Program References

References to U.S. federal and state government funding programs, tax incentive provisions, loan guarantee facilities, and grant programs — including but not limited to programs under the Inflation Reduction Act, the Bipartisan Infrastructure Law, and the Defense Production Act — are provided for general informational purposes only. Program terms, eligibility criteria, application windows, and award determinations are subject to change at any time without notice. No assurance is given that the Project will qualify for, be selected to receive, or successfully secure any funding under any such program. Recipients should independently verify all program details with the relevant administering agency.

An illustrative video will be shown during the presentation but will not be lodged with, or available on, ASX.

Geology

KEY FEATURES OF BARRAMBIE PROJECT:

- **Crustal-scale** Youanmi Shear Zone (YSZ) traverses length of Project . YSZ is associated with +5M Oz Au combined mined & remaining Resources (Sandstone & Youanmi only*);
- **Fertile hosts rocks** with gold occurrences in all major stratigraphic units across they Belt;
- **Structural association** of gold occurrences with NNE-trending structures traversing the Project.

YET…

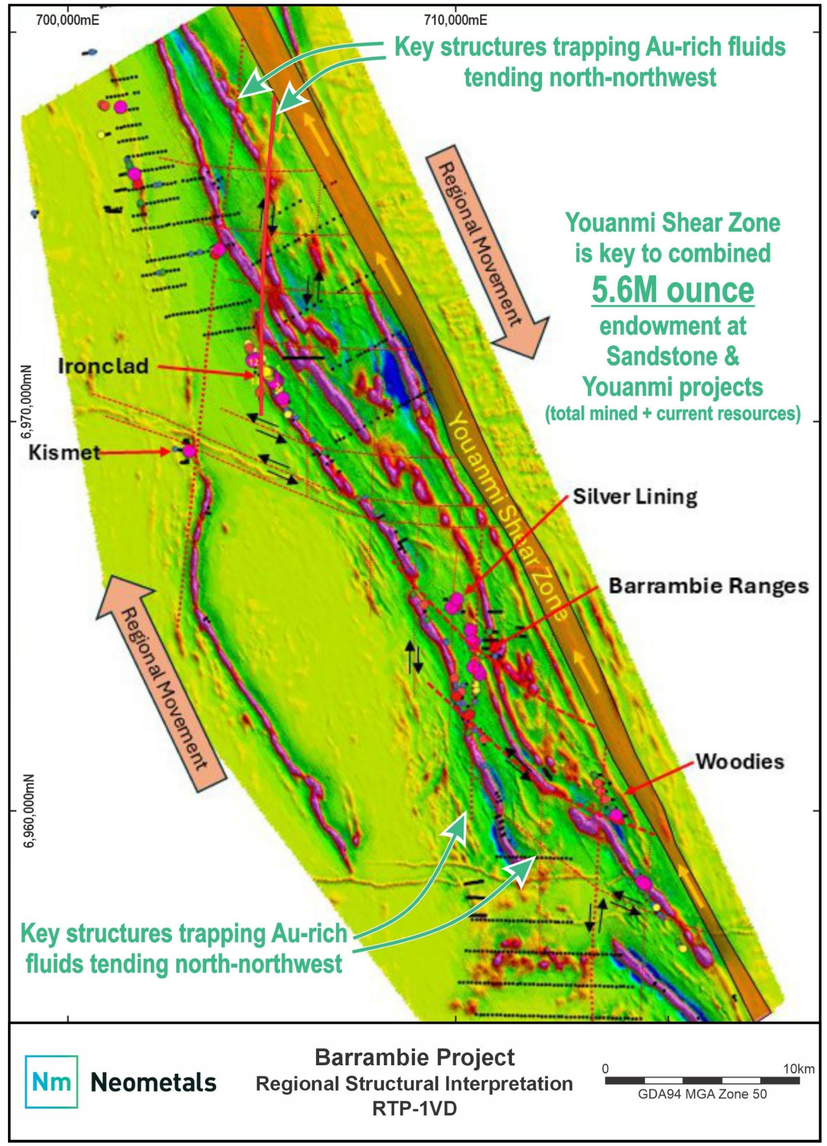

335k Oz to 775k Oz Exploration Target[1] contained in only ~20% of the Project area

CAUTIONARY STATEMENT- EXPLORATION TARGET

The Competent Person cautions that the potential quantity and grade of the Exploration Target are conceptual in nature and insufficient gold exploration has been undertaken to support estimation of a gold Mineral Resource for the Barrambie Project (notwithstanding the initial Ironclad Indicated and Inferred MRE) and that there is no certainty that future exploration will result in the estimation of a Mineral Resource.

The Competent Person further cautions that exploration data relied on for this Exploration Target is based on activity undertaken by previous historical operators and have not or may not have been previously reported under the JORC Code or any of its precedents and the Competent Person considers that these data are indicative and not absolute measures of the presence of gold mineralisation.

~80% OF PROJECT REMAINS UNDER-EXPLORED

Production JV[11,19]
Ironclad Deposit

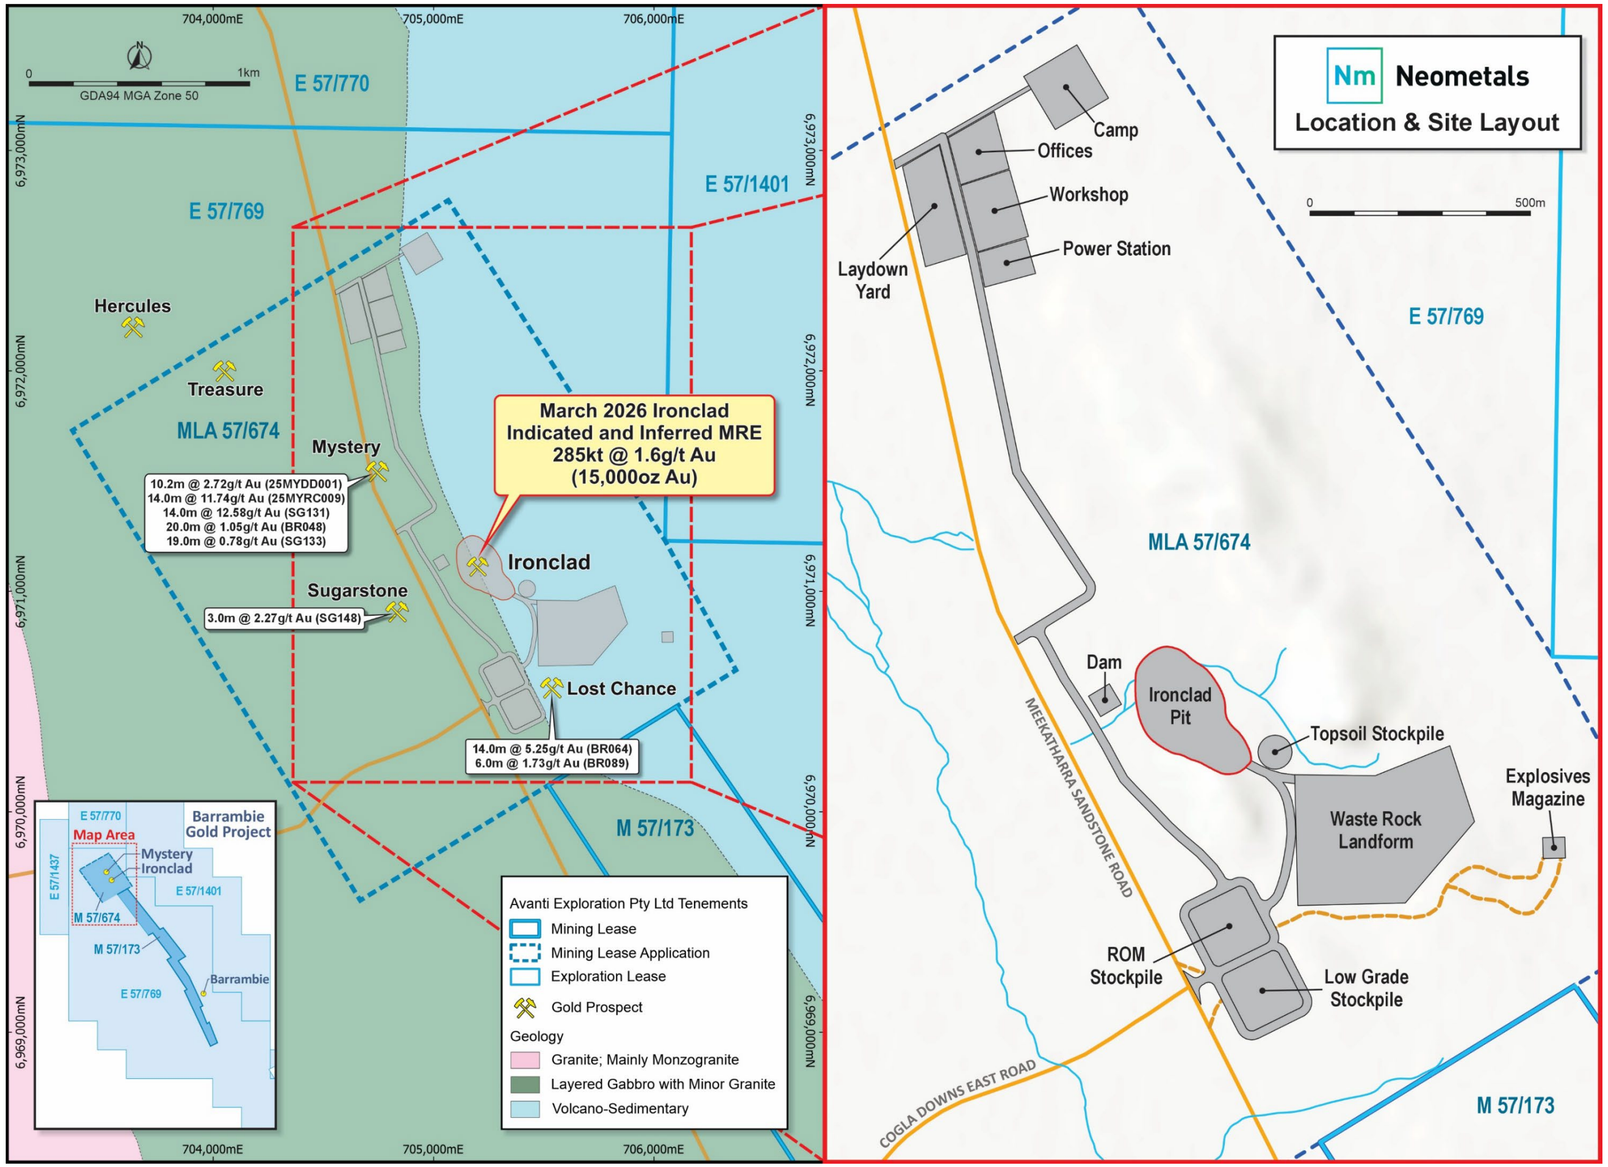

Mining services JV with experienced mining contractor BML Ventures Pty Ltd (BMLV) over open-pittable mineralisation from MLA57/674;

BMLV to fund the majority of pre-mining activities;

Subject to FID, BMLV to fund and manage mining and haulage operations, toll-milling with profits to be shared 50:50 (after cost recovery);

NMT/BMLV to enter a separate toll-milling agreement;

Minimal upfront capex is required from NMT, with production expected to de-risk the project and organically fund broader exploration.

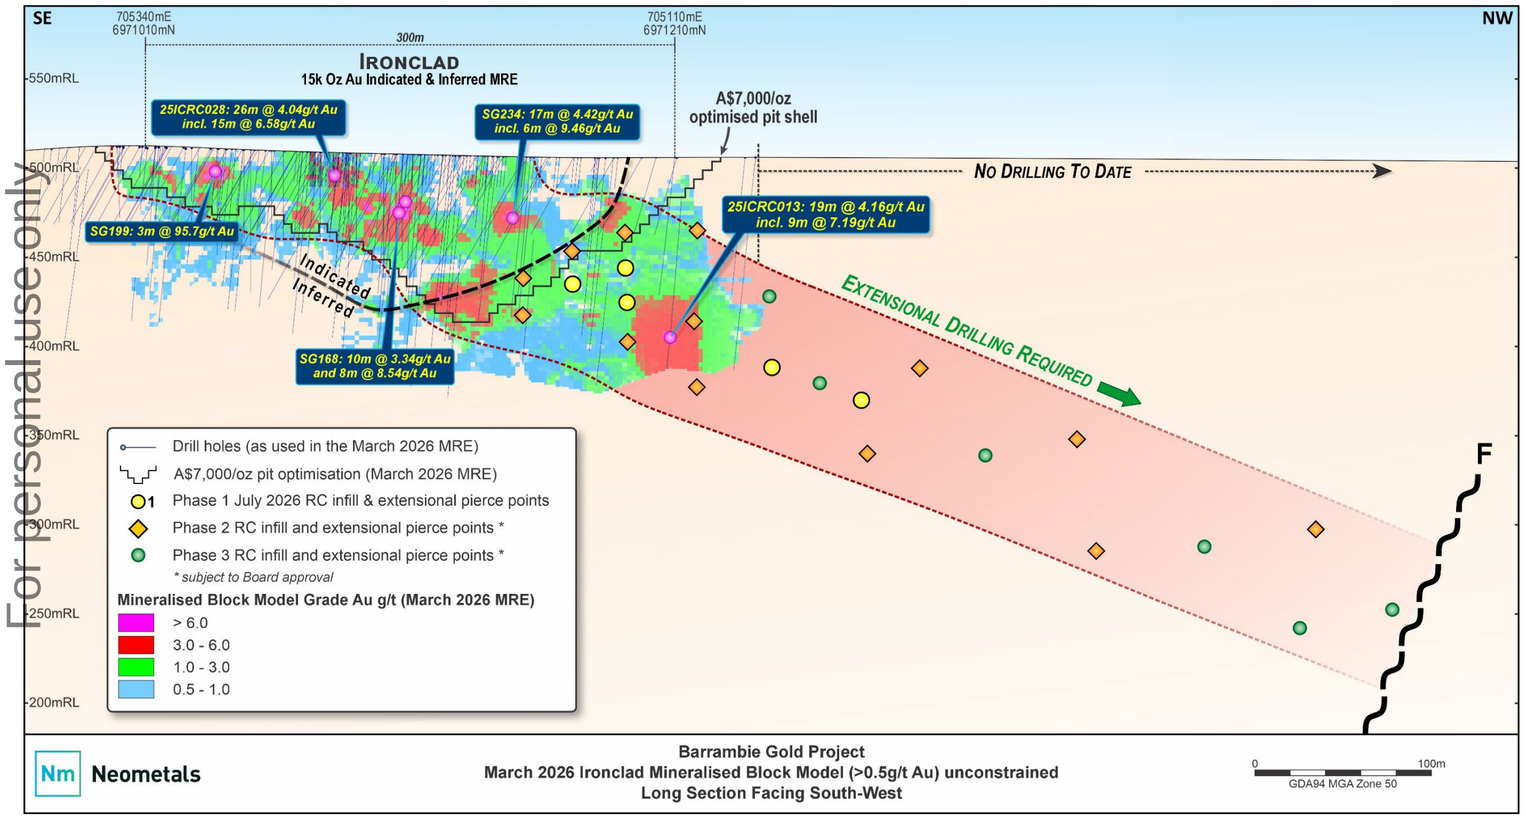

Ironclad local geology, March 2026 Indicated and Inferred MRE[15], mining lease application MLA57/674 and conceptual mine layout[16]

See Slide 3 for footnote references

For personal use only

Ironclad Deposit

Mineral Resource Estimate[15] and FY27 drill programs

Long section slice (looking southwest) through the March 2026 Ironclad Indicated and Inferred MRE, showing the block model (>0.5g/t), the A$6,500/oz optimised pit and drilling[1,7,15]. Planned infill drill holes added to image.

Historic and 2025 infill drilling has improved modelling of a higher-grade subset of mineralisation estimated to contain 180,000t @ 2.1 g/t Au;

~~Approximately 86% of contained ounces now in Indicated category;~~

~~Deposit remains open down plunge with 19m @ 4.16g/t Au~~ intercepted ~50m down dip of the current MRE.

Domain	Category	Block Cut-off	Tonnes	Gold Grade (g/t)	Gold Ounces
Higher-grade Domain	Indicated	0.5g/t	145,000	2.0	10,000
	Inferred	0.5g/t	35,000	2.1	2,000
Lower-grade Domain	Indicated	0.5g/t	100,000	0.9	2,800
	Inferred	0.5g/t	5,000	0.9	200
Total			***285,000***	***1.6***	***15,000***

March 2026 Ironclad Indicated and Inferred MRE, March 2026. Mineral Resources are reported above 0.5g/t Au block cut-off and constrained within a A$6500/oz optimised pit. No Ore Reserves derived from these Mineral Resources are reported in this presentation. Note: minor discrepancies may occur due to rounding[15]

See Slide 3 for footnote references

For personal use only

Scoping Study Metrics[16]

- Scoping Study cost model base case indicates potential for up to $23M free cash flow generation from Ironclad Gold deposit;
- Gold price assumption at A$7,000/oz. and 0.8 g/t Au cut-off grade;
- 12-month mining operation, toll processing assumed.

Leach Results[9, 22]	Units	Weighted Avgerage of 10 Sighter test & Phase 2 samples
Calculated Head Grade	g/t Au	2.03
Gravity + 8 Hr Leach Recovery	%	84.1
Gravity + 24 Hr Leach Recovery	%	88.4
Leach residue grade	g/t Au	0.17

CAUTIONARY STATEMENT – SCOPING STUDY

The Ironclad Scoping Study is a preliminary technical and economic assessment based on low-level studies (margin of error +/- 30%) and is insufficient to support estimation of Ore Reserves or to provide assurance of an economic development case. Approximately 82% of production is from Indicated Mineral Resources and 18% from Inferred Mineral Resources. There is a low level of geological confidence associated with Inferred Mineral Resources and no certainty that further exploration will result in their upgrade or that the Scoping Study outcomes will be realised.

Material assumptions, including funding requirements, are set out in Neometals' ASX announcement dated 19 March 2026. Those assumptions continue to apply and have not materially changed.There is no certainty that these assumptions will prove correct or that funding will be available on acceptable terms. Investors should not make investment decisions based solely on the Scoping Study results.

Key Parameters	Units	Scenario A 90% Recovery	Scenario B 85% Recovery
Mining			
Total tonnes mined	Mt	3.2	3.2
Total tonnes milled	kt	200 to 220	200 to 220
Au feed grade	g/t Au	1.8	1.8
Total Production			
Au recovered after processing	oz. Au	11,000	10,000
Operating Cost			
Total Operating Cost	A$(M)	50	50
AISC (ex. Royalty)			
Total AISC	A$(oz)	4,700	5,000
Revenue			
Revenue after royalty*	A$(M)	72	68
Cashflow			
Undiscounted Cashflows (Pre-tax)	A$(M)	23	19

Summary of Ironclad Gold Scoping Study cost model outputs. All results are on a 100% ownership basis[16]

Note: minor discrepancies may occur due to rounding
** Total royalty rate of 5.5% included.*

Utah Brine Project

1 Brine. 2 Critical Minerals. 3 Federal Mandates.

Utah Brine Corporation (UBC)
Neometals 51%
Omaha Value, Inc. 49%

Executive Summary

01 **Dual products from one brine**
Lithium chemicals plus MOP potash creates a differentiated domestic critical-minerals platform.

02 **Potential scale**
Exploration Target 1.9 – 6.4 Mt LCE and 94-320 Mt of MOP. Proposed Scoping Study design basis of 20,000 tpa LCE plus 800ktpa MOP.

03 **Brownfield acceleration**
23 inactive wells, existing data and potential proximate energy infrastructure/road can support compressed early evaluation timelines.

04 **Federal mandate fit**
DOE, USDA, DoD, IRA, FAST-41 and LPO themes align with domestic supply-chain priorities.

05 **Neometals lithium experience**
Mt Marion, ELi Process™ and Primobius demonstrate lithium value-chain and technology experience.

06 **Regular News flow & Value Catalysts***
Q3 CY26 bulk sampling → Q3–Q4 K & Li Process testwork & key well sampling for MRE → Q1-Q2 CY27 Maiden MRE + Scoping Study.

*Disclaimer: This indicative schedule is subject to change and is dependent on approvals, funding, permitting, development outcomes and market conditions. Actual outcomes may differ materially.

CAUTIONARY STATEMENT - EXPLORATION TARGET

The Competent Person cautions that the potential quantity and grade of the Exploration Target are conceptual in nature and insufficiently defined and that lithium exploration has been undertaken to support estimation of a Mineral Resource for the Utah Brine Project and that there is no certainty that future exploration will result in the estimation of a Mineral Resource.

The Competent Person further cautions that exploration data relied on for this Exploration Target is based on activity undertaken by previous historical operations and have not or may not have been previously reported under the JORC Code (2012) or any of its amendments and the Competent Person considers that these data are indicative and not definitive.

A single U.S. brine system. Two strategic products. Scalable capital-light entry.

19	3
K	**Li**
Potassium	Lithium

Domestic supply of lithium and potash from one reactivated brownfield asset — aligned to U.S. energy security, food security and defense supply-chain mandates.

CAPITAL ENTRY
US$ 2M

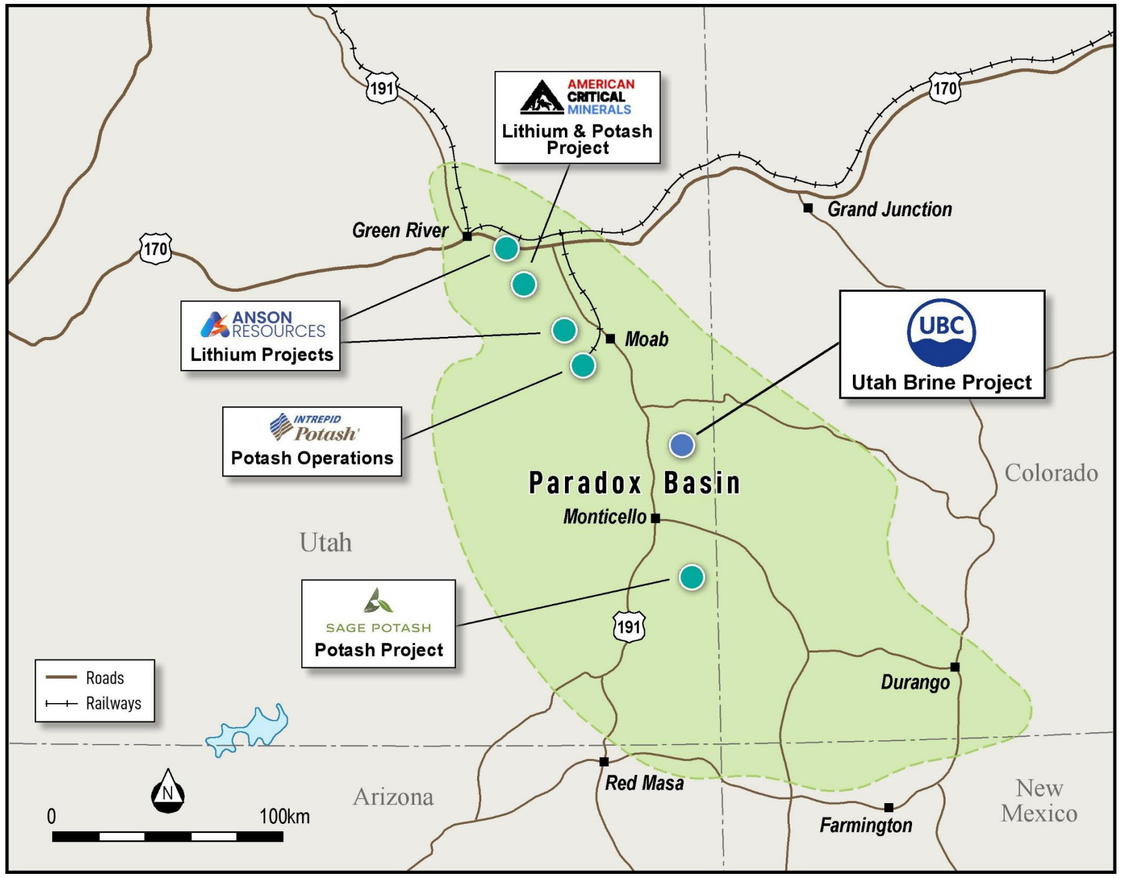

Funding commitment to maintain 51% of UBC
Capital-light brownfield entry - no greenfield acquisition cost.

For personal use only

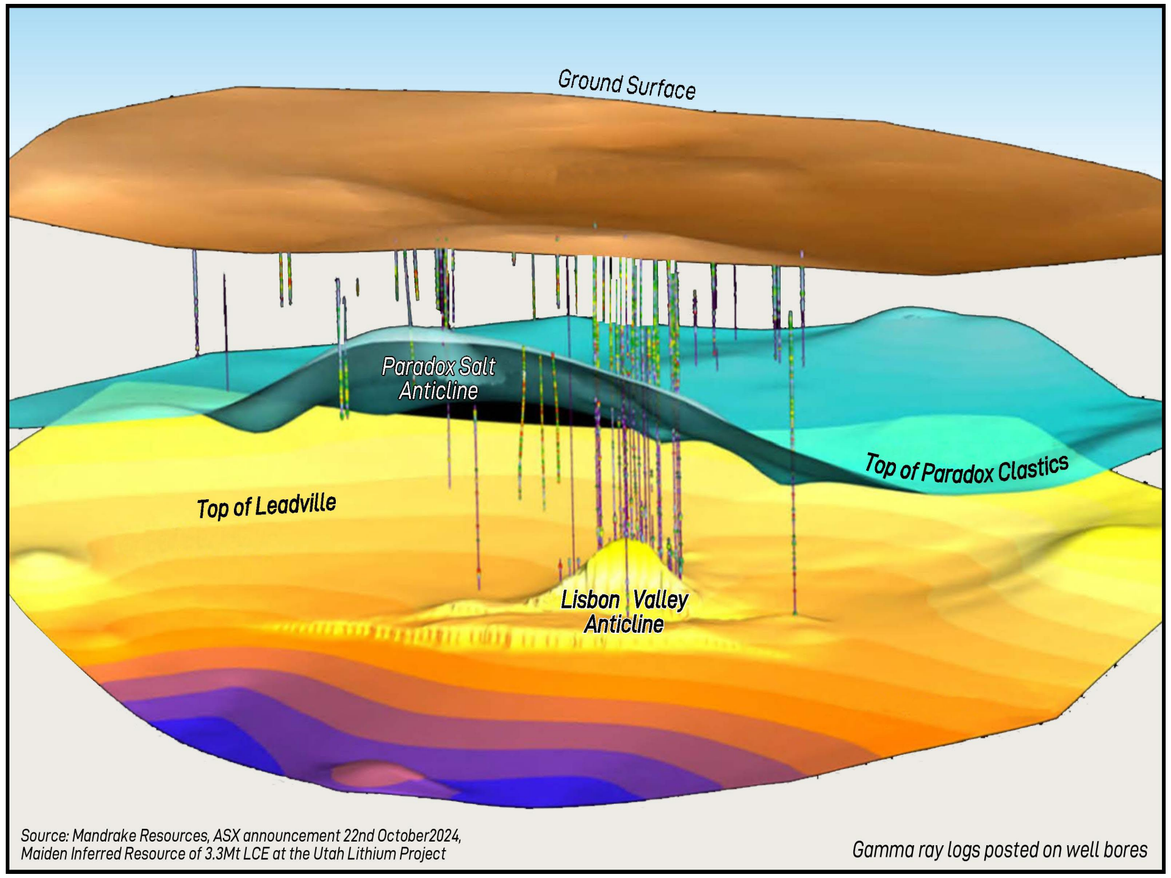

Location – Lisbon Valley, Utah

Paradox Basin. Known geology.

For personal use only

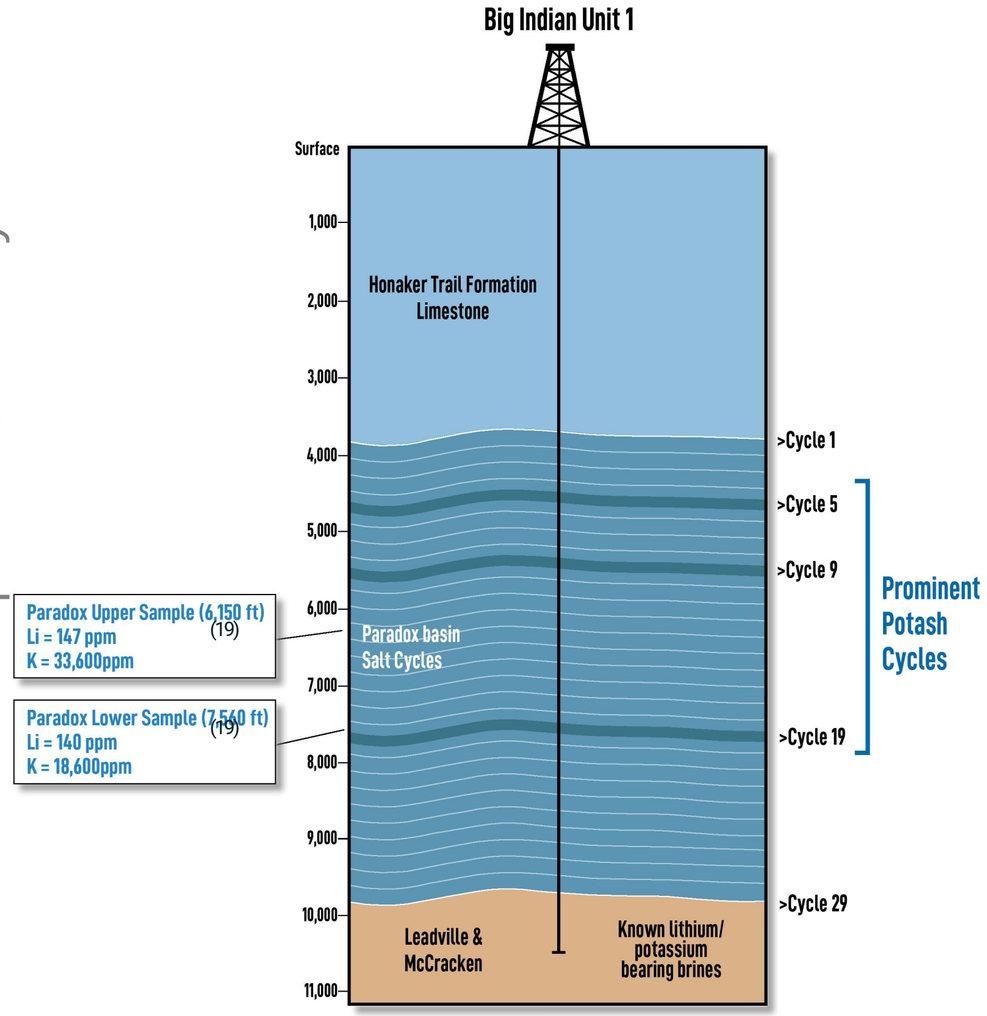

Utah Brine Project and peer locations within Paradox Basin formation

Geological layers in Paradox formation defined by gamma ray logs

Geological Setting and Brain Potential

For personal use only

Stratigraphic column showing clastic units and zones within the Paradox Formation

29 layers of prehistoric salts. Mother nature has already performed the hard work.

PARADOX FORMATION

29 layers (3)

Evaporitic paleo-seawater brines confined by low-permeability clastic interbeds.

HIGH-K LAYERS

9

Same layers mined commercially by Intrepid Potash at Moab since 1963.(3)

GRADES IN CONFIRMED LOCALITY

117 / 17,255 ppm (2)

Ranges derived from UBC exploration target process.

DLE & PRODUCT PURITY VALIDATED

92% / 99.9%

Li recovery + LiOH purity on this brine chemistry (Mandrake, May 2024).(4)

See Slide 4 for footnote references

Brownfield Footprint

Wellfield infrastructure for sampling and potential production. Potential access to low-cost power and gas and plant-site on private land.

For personal use only

INACTIVE O&G WELLS

23 [1]

Historic production and brine composition data via AHL / Ascent arrangements.

PROJECT LOCALITY

80,000 ac [1]

Potash lease nominations, prospecting permit applications and lithium placer claims.

POWER

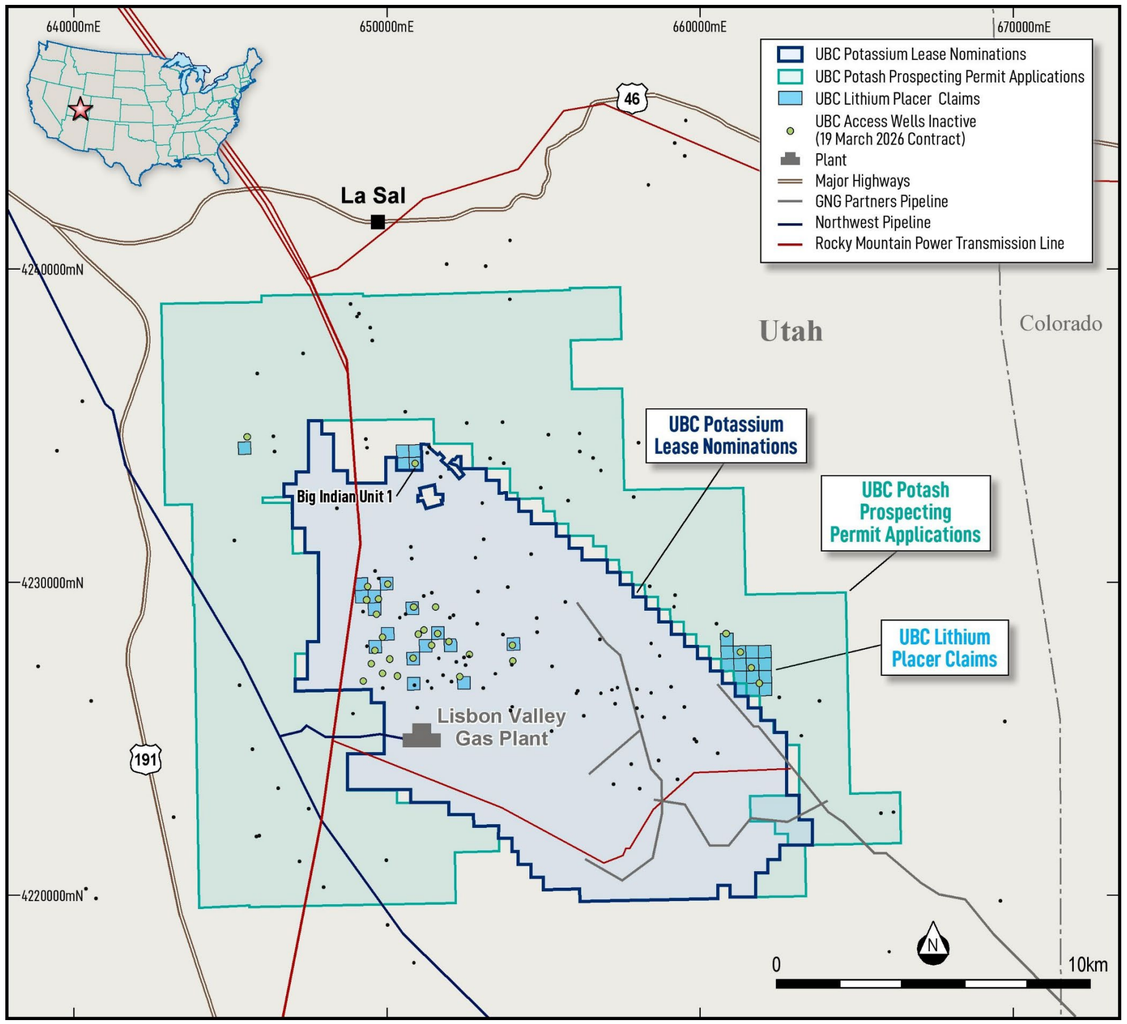

HV grid + gas

Proximate HV grid access via Rocky Mountain Power; nearby gas plant available subject to third-party commercial agreement.[10]

LOGISTICS

I-191

Year-round heavy-equipment access and regional sealed-road corridor.

UBC tenure applications and agreement access wells

See Slide 4 for footnote references

Integrated Processing Route

Potash first, then Lithium.

01 **Brine extraction**
Existing wells and potential future production wells

02 **MOP recovery**
Potassium recovered first as MOP / KCl.

03 **Li-bearing bitterns**
Post-potash brine remains lithium-bearing.

04 **DLE**
LiCl concentration and purification.

05 **ELi Process™**
LiCl to LiOH / battery-grade products. Conditional on a commercial agreement with Reed Advanced Materials (RAM).

06 **Products + reinjection**
MOP and lithium products; depleted brine managed.

Technology notes: The current concept contemplates established evaporation and membrane-based steps for potash, followed by a DLE pathway and potential ELi Process™ refining route for lithium chemicals. Final process configuration, equipment selection, recoveries, feed chemistry response and product specifications remain subject to pilot-scale test work and engineering studies.

Generated by Artificial Intelligence

For personal use only

Federal Funding Pathway

Opportunities for US Government support and non-dilutive capital path

ENERGY · DOE · CMEI / LPO

Brine DLE pilot & project finance

Pilot and demonstration grant opportunities, with debt funding potential for later construction stages.

FOOD · USDA

Fertilizer resilience & MOP

Supports rural development and the case for increased domestic potash capacity.

DEFENSE · DOD · DPA III

Critical-mineral materials

Potential support from qualifying critical-mineral processing incentives and more coordinated interagency permitting pathways.

TAX · IRA §45X · FAST-41

Production credit & permitting

Processing-cost credit on qualifying critical minerals; interagency permitting discipline.

See Slide 4 for footnote references

Funding Precedents

Not assumed. But on file.

US$330M[5]	Standard Lithium · DOE/ MESC Battery Materials Processing program
US$225M[7]	Anson Resources · US EXIM non-binding LoI for a long-term debt
US$120M[6]	Lynas USA · DoD
US$80M[8]	The Michigan Potash Company LLC, · USDA precedent

Note — Third-party awards are shown as precedents only and are not assumed in Neometals' base case funding plans.

For personal use only

Investment Thesis

Value Catalysts FY27

01 **Dual products from one brine**
Lithium chemicals plus MOP potash creates a differentiated domestic critical-minerals platform.

02 **Potential scale**
Exploration Target 1.9 – 6.4 Mt LCE and 94-320 Mt of MOP*.
Initial design basis of 20,000 tpa LCE plus 800ktpa MOP.

03 **Brownfield acceleration**
23 inactive wells, existing data and infrastructure access can compress early evaluation timelines.

04 **Federal mandate fit**
DOE, USDA, DoD, IRA, FAST-41 and LPO themes align with domestic supply-chain priorities.

05 **Neometals credibility**
Mt Marion, ELi Process™ and Primobius demonstrate lithium value-chain and technology experience.

06 **Regular News flow & Value Catalysts***
Q3 CY26 bulk sampling → Q3–Q4 K & Li Process testwork & key well sampling for MRE → Q1-Q2 CY27 Maiden MRE + Scoping Study.

***Disclaimers**:*
**Refer cautionary statement on slide 20.*
This investment thesis is subject to change and is dependent on approvals, funding, permitting, development outcomes and market conditions. Actual outcomes may differ materially.

For personal use only

Indicative Work Program

Forward-looking statements only. References to exploration targets, future resource estimates and scoping study outcomes are subject to technical, regulatory, funding and market risks. See prior ASX announcements and JORC cautionary statements.

Regular news flow opportunities. Targets a step-change in the investment case.
Each milestone is intended to address a key risk category

1

MILESTONE 1 Sep Q 2026:

BULK BRINE SAMPLING — Aims to reduce the 'unproven grades' discount.

20,000+ gallon sample intended from target well. To inform Li + K chemistry for JORC resource work.(15)

Value Catalyst:
Assay Results — Re-rating event. Confirm dual-mineral economics

2

MILESTONE 2 Dec Q 2026:

MET TEST WORK & RESOURCE DEFINITION SAMPLING — To reduce process risk & define grade potential.

Metallurgical test work on Lisbon brine to confirm Li recoveries and inform process design. In parallel, key wells to be sampled to support a maiden Mineral Resource Estimate.

Value Catalyst: Feasible flowsheet defined & Multiple well assays across tenure

3

MILESTONE 3 Mar Q 2027:

MINERAL RESOURCE ESTIMATE — To define size and scale potential.

JORC Inferred MRE for K and Li across the Lisbon Valley project;

Value Catalyst:
First size and grade estimate. Aims to enables economic studies to be finalized.

4

MILESTONE 4 Jun Q 2027:

SCOPING STUDY — To define high-level financial opportunity

Scoping Study aims to shift market perception from speculative to proven economic potential. Ideally delivers high-level opex and capex enabling peer benchmarking and identifies fatal flaws. Feasibility Study decision gate.

Value Catalyst:
First economics published — fundable asset status.

Neometals

Summary

For personal use only

Exposure to Gold and Critical Metals – Multiple Shots on Goal

For personal use only

Commodity Diversification – Balanced exposure to gold (cashflow stability) + lithium/vanadium (growth) materially reduces single-commodity cyclicality.

Business Model Diversification – Capital-light mix of targeted near-term cashflow (Barrambie), royalties (ELi™) and upside participation (Utah + VRP).

Platform for ESG-aligned Sustainable Growth – Lower-carbon, lower-cost technologies supplying metals for electrification, storage & circular economy.

Experienced Leadership and Partnerships – Proven management team with strong track record, and collaborations with global leaders.
